and Opportunities States Face**

Strong Start, Strong Finish: An Education-to-Workforce Vision for Alabama

- Governor Ivey has established a strategic vision for aligning Alabama's education and workforce programs from Pre-K to the workforce to provide for a seamless education-to-workforce continuum for all Alabamians.
- Governor Ivey has set a postsecondary education attainment goal of adding 500,000 credential holders to Alabama's workforce by 2025.
- Governor Ivey has set a goal to increase Alabama's labor force participation rate of 57.6% to the national average by 2025.

EDUCATION &
WORKFORCE
NEEDS INDEX

What is it?

The Education and Workforce Needs Index (EWNI), in development, is a focused interface that will enable users to assess the well-being of their states and regions to more easily identify key areas of success and challenge in developing education and workforce capital. The overall index utilizes 16 well-researched and field-tested measures across three categories: education, workforce, and population demand.

At every stage in the quest to target focus areas and craft viable solutions, the ultimate goal is for users to have access to downloadable images for presentations and documents as well as data for further analysis.

What is the intended outcome?

The intended outcome is to quickly and easily identify the areas of greatest need in addressing education and workforce challenges. In fast-changing and advancing economic conditions, more informed decisions related to policy and practice are made regarding the development of education and workforce capital that is based on sound data, information, and a framework designed to bridge the divides amid data, research, policy, and practice.

The Dilemma of Resources for Leaders

- **Once upon a time, economic data was sparse.** Leaders direct more on personal observation and applied random data to justify their efforts.
- **Then information became ubiquitous.** Data was everywhere, but people tended to focus on information that validated their efforts, rather than concentrating on information that would identify the real issues and prospective solutions. Because so much information was available from which to choose, important data was unknown, ignored, or not emphasized.
- **But not all data is created equal.** What data is actually essential to effective and onward decision-making? What data is irrelevant or tangential? What data can keep the leadership team focused on what is mission critical?
- **The EWNl was designed to help leadership teams.** Focusing on information that matters for developing education and economic strategy is critical.

Public Use Microdata Areas (PUMAs)

The unit of analysis for the annual U.S. Census Bureau American Community Survey.

What are Public Use Microdata Areas (PUMAs)?

- Non-overlapping, statistical geographic areas that partition each state or equivalent entity into geographic areas containing no fewer than 100,000 people.
- Cover entirety of United States, Puerto Rico, Guam, and the U.S. Virgin Islands.
- Defined every ten years for the tabulation and dissemination of the decennial census and American Community Survey (ACS) Public Use Microdata Sample (PUMS) data.
- Also used in the publication of the ACS and Puerto Rico Community Survey period estimates.

Advantages

- Available annually (detailed Public Use File)
- More accurately reflect demographic patterns by population density (urban and rural)
- Ability to more finely disaggregate (by age-group, race, gender, occupation, education level, labor force status, etc.)

Disadvantages

- Smaller sample size (1% American Community Survey versus 5% Decennial Long Form)
- Ability to finely disaggregate (standard errors)
- Communication of geographic boundaries (counties versus PUMAs)

Education and Workforce Needs Index

Factors and Measures

Education

- Ages 18 to 64 with a High School Diploma Only
- Ages 25 to 64 with an Associates Degree
- Ages 25 to 64 with a Bachelor's Degree
- Difference in College Attainment between Young and Older Adults
- Ages 18 to 29 with No College Credential, Not Enrolled

Workforce

- Working-Age Participation in the Labor Force
- Unemployment
- Employment in Manufacturing and Extraction
- Median Personal Income (total personal income)
- Median Annual Wage Income (full-time workers)
- Adults with SSI or Welfare Income

Population

- Population Ages 0 to 19
- Population Ages 20 to 44
- Annual % Change in Population Under 65
- Ages 25 to 64 in Poverty

EWNI Correlation Factors

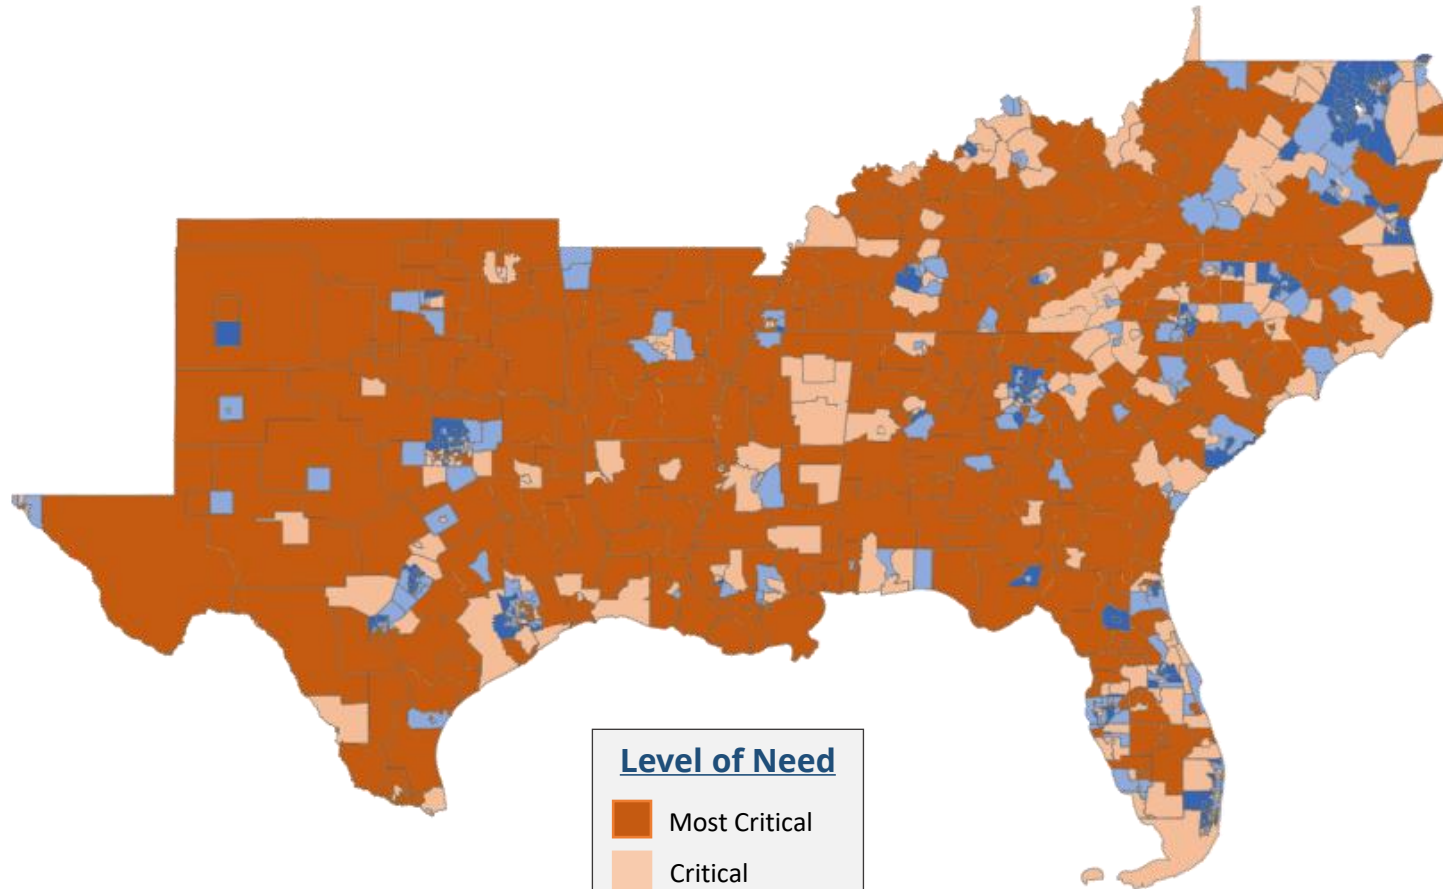

EWNI Measure	Education					Workforce					
	High School Completion Only	Associate Completion	Bachelor's Completion	Difference between Young and Old	Enrollment of Non-College Degree Holders	Not Participating in Labor	Unemployment	Employment in Volatile Industries	Median Wages for Full-Time Workers	Total Personal Income	Percentage on Public Assistance

Engage in Community Outreach to Share Data

Focused Strategy, Implementation, and Practice Examples

- Increase college going directly out of high school (e.g., FAFSA completion, work-based learning, affordability, communication, etc.)
- Provide collegiate opportunities for nontraditional students with wrap-around services
- Incentivize the retention of residents with bachelor's degrees and higher
- Better align programs with local needs with a focus on underrepresented minorities
- Continue to support postsecondary education and workforce alignment
- Establish apprenticeships with meaningful links to local employment while pursuing credentials
- Apply retraining and retooling strategies to address the ever-changing industry needs
- Seek close engagement, strategy development, and practice among education and workforce agencies regarding the development of regional human capital

Determining Level of Need

There are 2,351 Public Use Microdata Areas (PUMAs) in the United States. They are the geographies within states that are surveyed in order to gain more representative samples of populations. The PUMAs and state workforce regions are simply displayed in rank order (in percentiles) relative to other PUMAs and regions across the U.S. on each factor in the EWNl. The education, workforce, and population factors of the index are the average of the percentile rankings across each of the measures in the factor. The “overall” need is the average of the education, workforce, and population factor scores.

What are Public Use Microdata Areas (PUMAs)?

- Non-overlapping, statistical geographic areas that partition each state or equivalent entity into geographic areas containing no fewer than 100,000 people.
- Cover entirety of United States, Puerto Rico, Guam, and the U.S. Virgin Islands.
- Defined every ten years for the tabulation and dissemination of the decennial census and American Community Survey (ACS) Public Use Microdata Sample (PUMS) data.
 - Also used in the publication of the ACS and Puerto Rico Community Survey period estimates.
